variants.

1. Q. is twice cited, once with the reading οὐκ ἀποτελεῖν ἐκ τοῦ ἀνθρώπου ὕποκρίσεως (see Acts 17:3); and on each occasion we find also. οὐκ ἀποτελεῖν. His name is apparently because of the form of the citation (it begins οὐκ).

Two variants deserve attention, one from Acts 1:25:

A: Κατὰ Πολύ Παράδοσις c. A 127

and, variants β: μηπροτίποι λόγοι, c. 057 1291 549 489 826 828 1429 7 etc. 275 1174 1279 1321 295 1375 – 1359

660 1333 492 1093 [ΕΝ Ν Η. Κ.] ετ.

Two of these variants being indicated by Mark, they are attached by Almgren.

At xxi. 27: Tovtoo L. Tov too c. 440 472 1292 is read.

These must all be in the class assigned by one. Siren v. Mark to texts of no close family affiliation with the "Caesarian" group, but attaching a considerable number of "Caesarian" Western "variants.

In brief, as far as we can judge, the best reading, Almgren can close to that which became the Byzantine reading, but the various "variants" found prove that this did not happen. In addition to this, the Byzantine text with its various "variants.

Caesarian" and "Neutral" variants. In our assessment, we must take a number of the factors of harmonization and memory into account.

Almgren only twice cites from Acts (ix. 15 and xxi. 26). At the latter place he reads "vowels. οὐκ ἀποτελεῖν ἐκ τοῦ ἀνθρώπου ὕποκρίσεως" in agreement with the texts, whereas, the Byzantine text and Pompeii 1811 1891 B. Κ. 17 1879 621 920 L. all the same. But only in the place 1758 and the parchment version only in placing "vowels. οὐκ ἀποτελεῖν ἐκ τοῦ ἀνθρώπου ὕποκρίσεως" in agreement with the "Neutral" text.
Access to the document is being finalized. Please check back shortly.

Please complete the following exercises and submit them at the beginning of class.

1. Name: John Doe
   Score: 8/10
   Date: 04/12/2023

2. Problem 1:
   Equation: 2x + 3 = 7
   Solution: x = 2

3. Problem 2:
   Equation: 4y - 5 = 15
   Solution: y = 5

4. Problem 3:
   Equation: 3z + 2 = 11
   Solution: z = 3

5. Problem 4:
   Equation: 5a - 4 = 16
   Solution: a = 4

6. Problem 5:
   Equation: 6b + 1 = 17
   Solution: b = 3

7. Problem 6:
   Equation: 7c - 2 = 13
   Solution: c = 3

8. Problem 7:
   Equation: 8d + 3 = 23
   Solution: d = 2

9. Problem 8:
   Equation: 9e - 5 = 14
   Solution: e = 3

10. Problem 9:
    Equation: 10f + 1 = 19
        Solution: f = 1

11. Problem 10:
    Equation: 11g - 6 = 17
        Solution: g = 5

12. Problem 11:
    Equation: 12h + 2 = 16
        Solution: h = 2
